TECHNICAL SKILLS

Languages: JavaScript/Typescript, Python, SQL, Java, C/C++, HTML/CSS, Assembly, Nix

Frameworks: React, Express, NextJS, Convex, Neon, Hono, WorkOS, Clerk

Developer Tools: Git, GitHub, VS Code, Postman, Emacs, Claude

Libraries: TailwindCSS, NumPy, Matplotlib, Mongoose, Shadcn, BetterAuth, Playwright, Axiom

EXPERIENCE

Vendor Report Webapp

Jan. 2026 – Present

Freelance Software Developer, All Through The House

Okotoks, AB

- Built and maintain a **B2B web application** that replaced admin-only reporting with self-serve vendor access
- Integrated the Square SDK to ingest live transaction data, parsing and attributing **over 7,000 orders** into **10,000 vendor-specific entries** for per-vendor reporting
- Modeled the consignment workflow with Prisma over NeonDB Postgres, working around Square's lack of a **native vendor concept** to attribute sales across a shared storefront
- Designed a role-based access system using separate vendor, admin, and unassigned permission groups, supporting users tied to multiple vendor accounts
- Built interactive dashboards surfacing sales history and orders-over-time charts, replacing month-end manual reporting and eliminating an estimated **120+ weekly sales-data requests** to the store owner
- Ran UX surveys and used Playwright tests to fix onboarding and sign-in issues for non-technical users
- Reduced API call latency from **500ms to 300ms (40%)** through caching and query optimization

Undergraduate Research Assistant

May 2025 – Aug. 2025

Mount Royal University

Calgary, AB

- Built Python visualization pipelines using NumPy and Matplotlib to analyze simulation outputs for malware propagation research in wireless sensor networks
- Prototyped simulations using emerging research libraries to model malware spread patterns, enabling the team to evaluate new modeling approaches
- Authored LaTeX technical documentation of experimental methodology and results for research publication

PROJECTS

Stoa | React, Typescript, Tauri, Convex, TailwindCSS, WorkOS

Mar. 2026 – Present

- Shipped features incrementally alongside a team using Git branching workflows to keep parallel work conflict-free
- Translated feature requirements into tracked tasks via Agile sprints, managing scope across the team
- Prototyped UI flows and iterated with teammates through design reviews to refine the end-user experience
- Built a file-upload system with a custom UI and status menu, serving resized copies to **cut media costs by 80%**
- Diagnosed and resolved cross-platform compatibility bugs spanning Windows, macOS, and Linux

Urban Pulse | NextJS, Typescript, Prisma, NeonDB, Ollama, AWS S3 (Hack the Change 2025)

Oct. 2025

- Built the backend in a 24-hour hackathon for a full-stack web app letting residents report and view urban infrastructure issues
- Designed the Postgres schema with Prisma and NeonDB, and implemented authentication and session management with Neon Auth
- Integrated **AWS S3** for user-uploaded issue photos using presigned URLs for direct client-to-bucket uploads
- Wired up API calls to a remote **Ollama** LLM hosted on a teammate's server, enabling AI-powered features without external API dependencies

EDUCATION

Mount Royal University

Calgary, AB

Bachelor of Science in Computer Science

Sept. 2023 – Current

- Dean's Honour Roll (6 consecutive semesters)
- President's Honour Roll (3 consecutive years)
- Cumulative GPA: **3.91/4.00**
- Relevant Courses: Algorithms and Complexity, System Design, Introduction to Databases, Foundations: Software Engineering, Web Development for Computer Science, Computing Architecture and Machinery, Human-Computer Interaction
